- Local–HQ alignment

REGULATORY STRATEGY

- Data governance
- Cross-border data
- Cyber regulation
- Social credit system
- Green compliance
- AI regulations

The Digital Fracture Is Here—Survive and Thrive in China's New Tech Order

Stringent local regulations, geopolitical tensions, and tech stack segregation are reshaping the landscape for global enterprises.

Without a strong and compliant IT and data strategy, companies are putting their successful China operations at risk.

- **A Unique Digital Landscape** – China's push for digital sovereignty is reshaping local and global enterprise IT.
- **Increasing Regulatory Pressure** – Corporate data, network security and cross-border data flows are under intense scrutiny.
- **Risk Mitigation Requires a Strategy** – Businesses must move beyond compliance and build robust, adaptive IT frameworks.
- **Now Is the Time to Act** – Global and local trends are accelerating at breakneck speed – companies that wait will be left behind.

Addressing Three Critical Challenges in China's Digital Landscape

A

Our existing IT architecture was designed for a globally connected environment. With increasing tech stack separation and digital de-globalization, we are facing significant IT and data challenges in China and need to re-evaluate our China IT strategy.

B

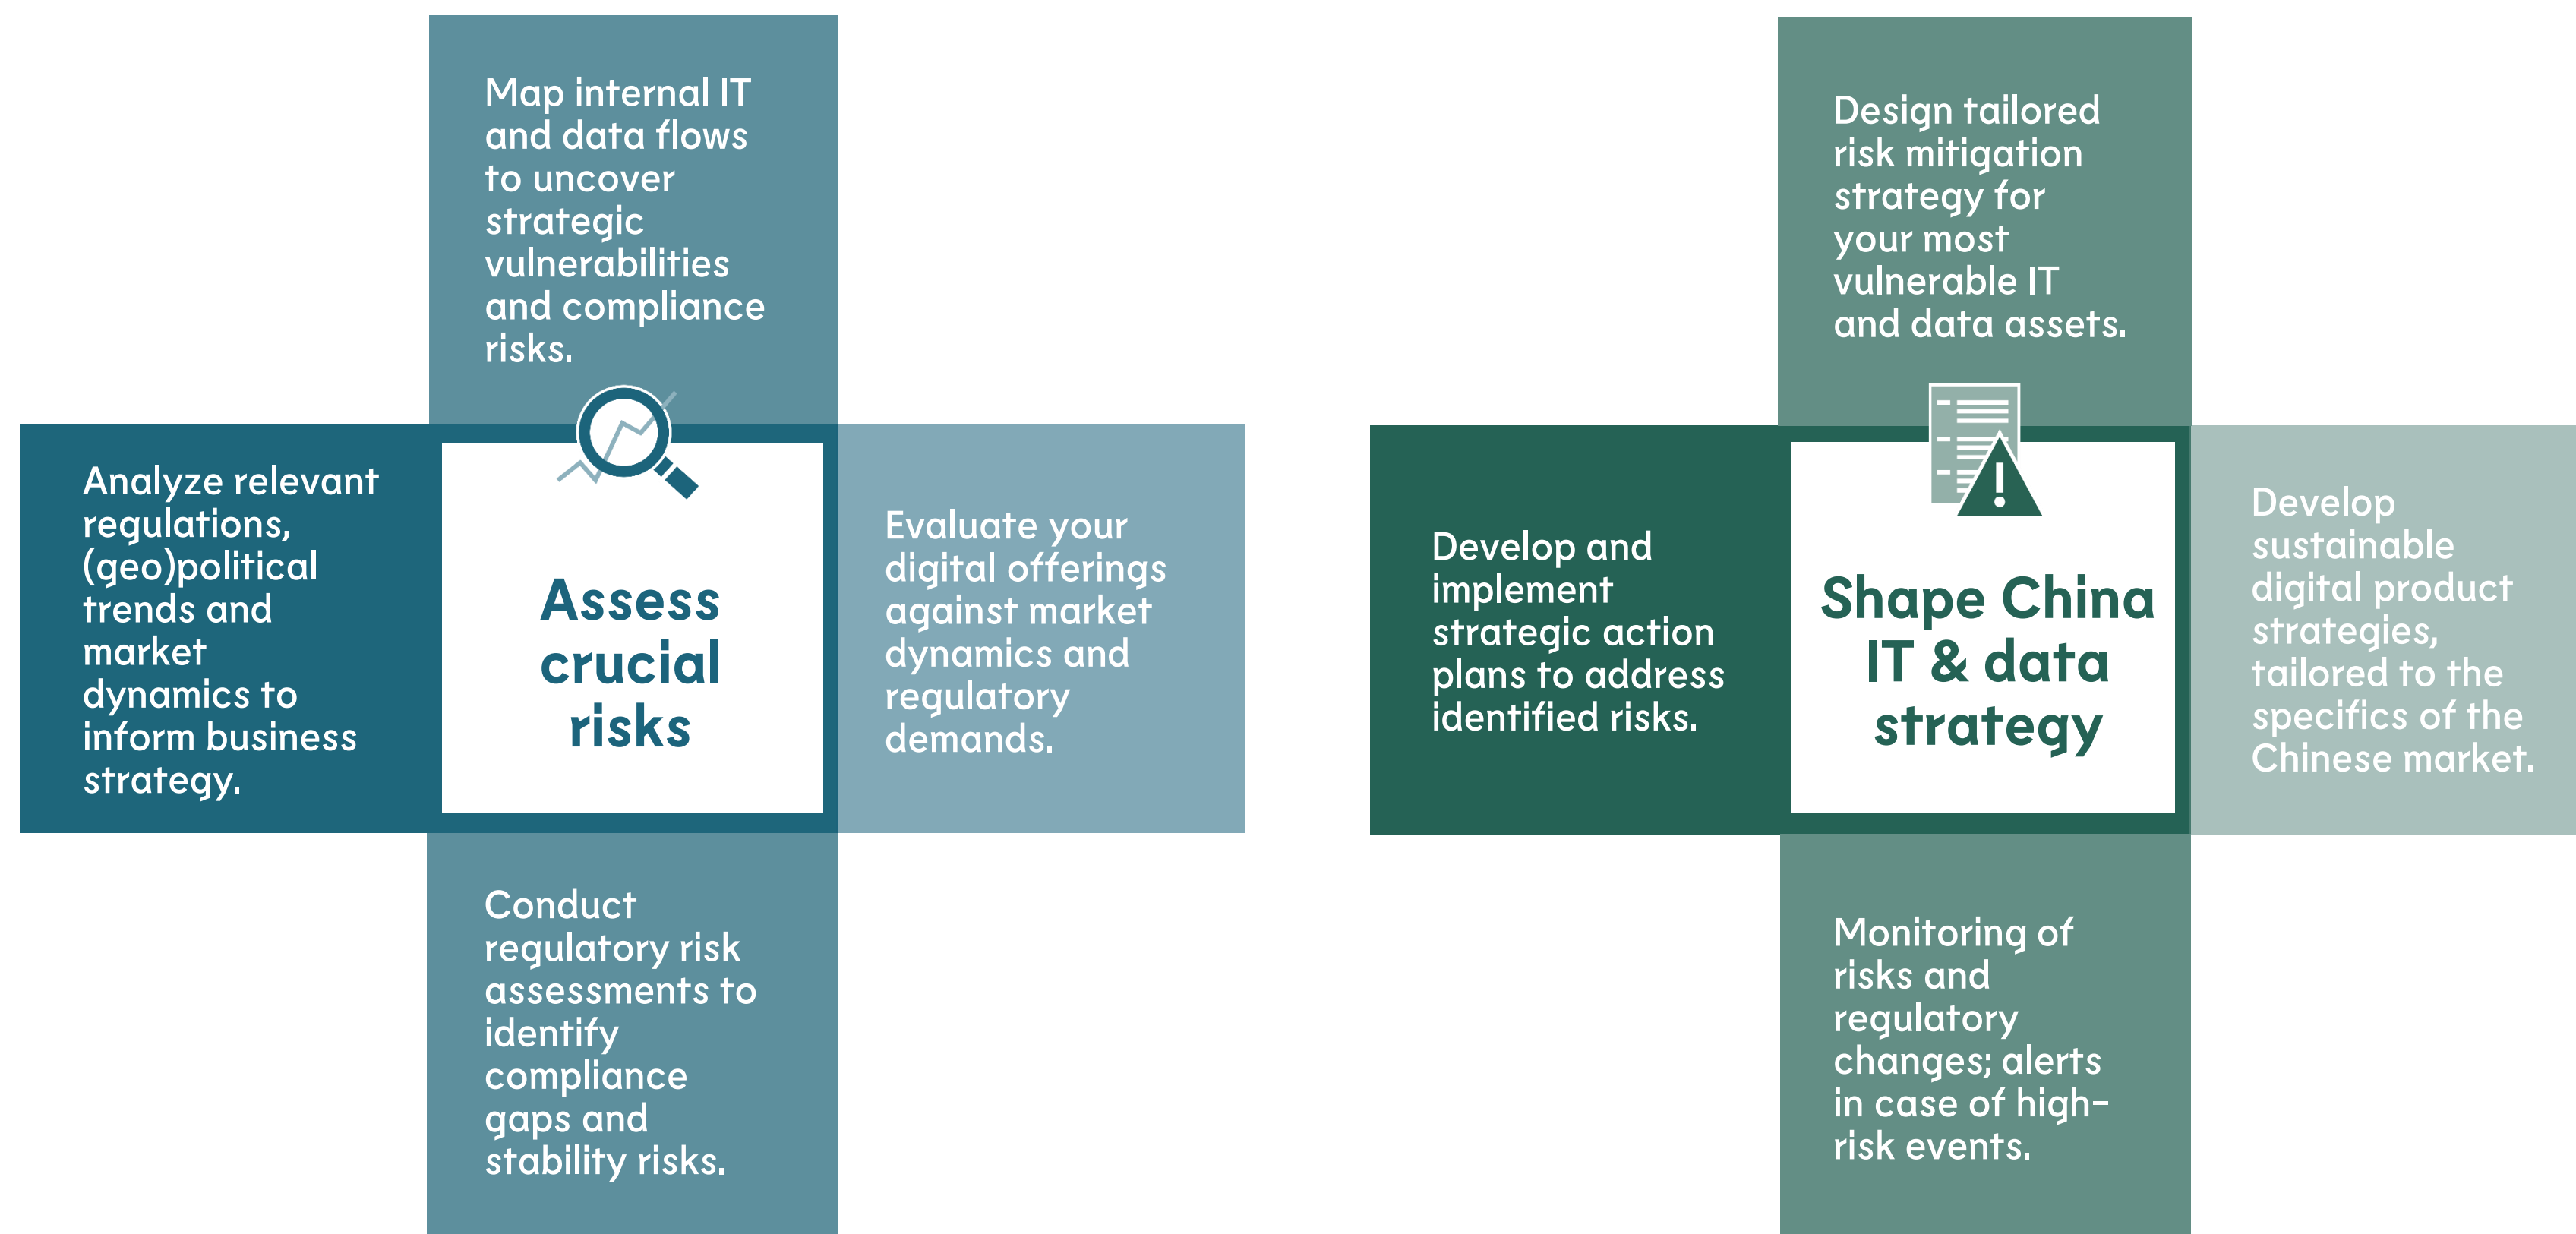

To stay competitive in China, we must digitize our products and services. It's essential to enhance our understanding of China's regulations and digital landscape to assess the impact and create a successful digital portfolio strategy.

C

Keeping track of China's cyber and data regulations is challenging, but critical to assessing the regulatory risks of our China entities and understanding the broader impact on our company's IT and data to ensure the stability of our global operations.

What
we
offer.

We Help You Assess and Define your IT and Data Strategy for China

Case A: China IT and Data Stock Risk Assessment

A

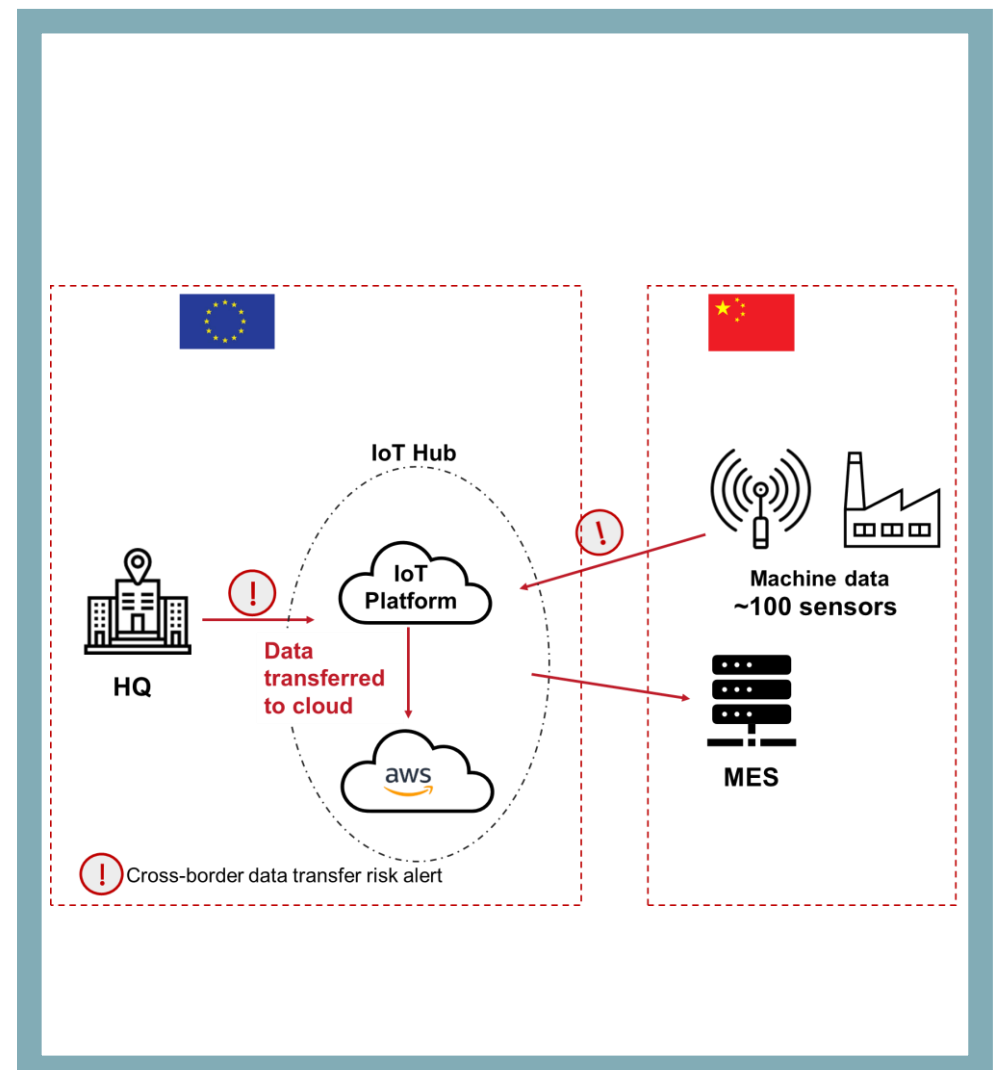

Our existing IT architecture was designed for a globally connected environment. With increasing tech stack separation and digital de-globalization, we are facing significant IT and data challenges in China and need to re-evaluate our China IT strategy.

OUR SOLUTION

- We take stock of your IT and data in China, incl. cross-border data flows.
- We determine the impact of different risk scenarios on your most vulnerable IT and data assets.
- We design your risk mitigation strategy.

OUR TRACK-RECORD:

- China IT and data asset mapping and IT risk assessments for companies of all sizes from a variety of sectors, incl. chemical, machinery, finance.

Case B: Digital Portfolio Strategy for China

B

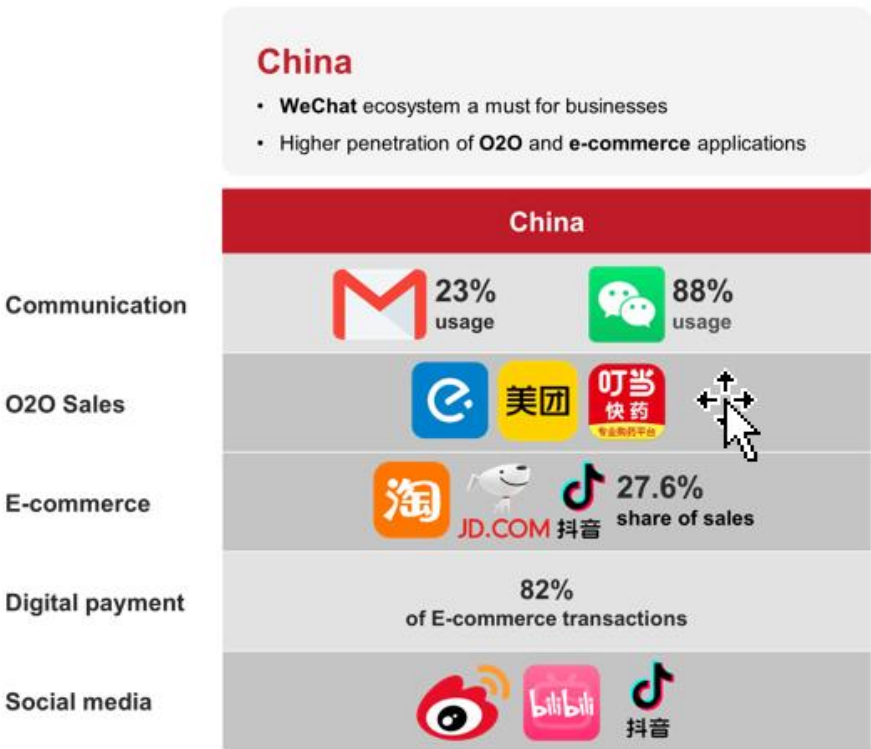

To stay competitive in China, we must digitize our products and services. It's essential to enhance our understanding of China's regulations and digital landscape to assess the impact and create a successful digital portfolio strategy.

OUR SOLUTION

- We assess the impact of China's regulations on your specific digital products and services.
- We provide case-specific analysis of market opportunity, competitor benchmarking and partner scouting.

OUR TRACK-RECORD:

- Regulatory impact assessments for a large variety of major European and U.S. companies.
- Digital portfolio and go-to-market strategies for MNCs in pharma, machinery, automotive, etc.

Case C: Regulatory Risk Assessment and Action Plan to Compliance & Stability

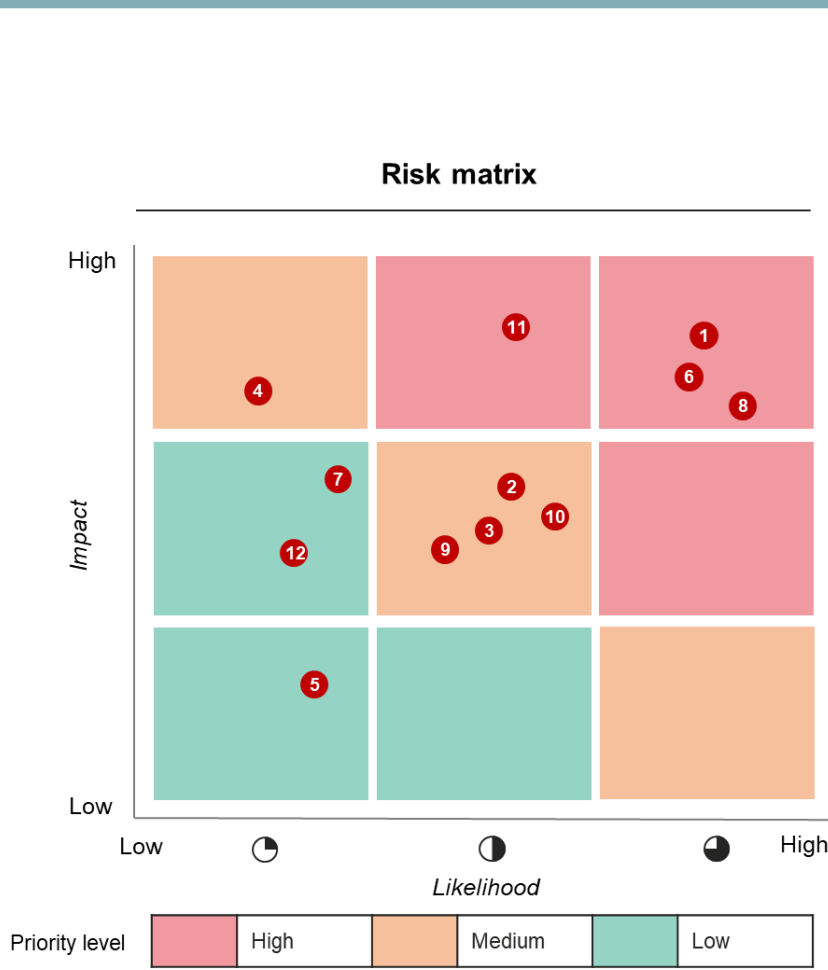

Keeping track of China's cyber and data regulations is challenging, but critical to assessing the regulatory risks of our China entities and understanding the broader impact on our company's IT and data to ensure the stability of our global operations.

OUR APPROACH

- We pinpoint the relevant cyber and data regulations specific to your setup in China.
- We assess your regulatory and stability risks and develop an action plan to compliance and stable operations.

OUR TRACK-RECORD:

- Regulatory risk assessments for a large variety of European and U.S. companies.
- Regulatory monitoring and risk alerts for high-risk events for a wide range of industries.

Let's find solutions.
